

Replacement wheels and pins for treadle machines.

I make wheels from aluminum stock as replacement wheels for treadle machines. Singer machines are about ½” wide; other brands are wider, so if you want to order wheels and pins let me know what base you are ordering the wheels for. The stock is 1 ¼” diameter which works on most frames.

The pins are aluminum so it is easy topeen the end to secure them in the machine base.

To Install: Lay the base down and put a support under the end of the pin already panned. Use a hammer to tap around the edges of the un-panned side of the pin to spread it out.

CAUTION should be used to make sure you do not hit the old cast iron leg of the base; you could easily break it off.

Take your time!

When panned such that the pin will not come out you are done.

Wheels and pins are \$12.00 each plus shipping.
